SUMMARY

Frontend engineer with 5 years building operational software people use all day: planning and scheduling tools for an EU logistics platform, and a restaurant reservation product I own end to end as co-founder. I work at the architecture level. Recent work: production builds cut from 52s to 3s, a 280-file codebase restructured into a Feature-Sliced architecture now at 559 files with zero boundary violations, and a React Native app shipped solo to both app stores. Also ship Java/Spring Boot and Node when a feature needs the API written too.

SKILLS

Frontend: React, TypeScript, Next.js, React Native / Expo, Redux Toolkit, TanStack Query, React Hook Form, Zod, Material UI, shadcn/ui, Tailwind, Vite, Feature-Sliced Design (FSD)

Testing: Vitest, React Testing Library, MSW, Jest

Backend: Java 17/21, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, Node.js, Prisma

Infra & DevOps: Kubernetes, Docker, Helm, AWS (Secrets Manager, STS, OIDC), Jenkins, SonarQube, Prometheus

Languages: Georgian (native) · English (professional) · Russian (professional)

EXPERIENCE

Senior Software Engineer · Georgian Service Group

June 2021 - Present

EU e-commerce logistics platform for parcel routing and truck-line scheduling across Europe. Frontend lead in practice on a 20+ engineer team, also shipping backend services and CI/CD.

- Built the core planning and scheduling interfaces (daily, weekly and historical views with dynamic filtering, forecasting and scenario comparison) that operations staff run the business on.
- Set the frontend data-layer standard used across a 25+ engineer codebase: Redux Toolkit for UI state, TanStack Query for server state, plus a shared cache-invalidation policy that ended a recurring class of stale-data bugs.
- Built and maintained the shared component library (forms, tables, dialogs, filters) every frontend team builds on, removing duplicated UI across the platform.
- Modernised the toolchain: led the CRA to Vite and Moment.js to Day.js migrations, and introduced Vitest unit and integration testing to a codebase that had none.
- Ship beyond the frontend: Spring Boot REST services, a microservice built from scratch with OIDC auth and AWS Secrets Manager, Jenkins CI/CD with SonarQube gates, and Kubernetes via Helm.

Stack: React · TypeScript · Vite · Redux Toolkit · TanStack Query · Vitest · Java 17/21 · Spring Boot · AWS

Co-founder & Frontend Lead · Skiper Technologies GmbH

2022 - Present

B2B restaurant reservation platform. One of three co-founders and sole owner of the entire frontend across web, embeddable widget and mobile.

- Own the entire frontend from first commit to production across 10+ product domains: the web portal, an embeddable booking widget, and the React Native app.
- Cut production builds from 52 seconds to 3 by migrating CRA to Vite, then restructured a 280-file flat codebase into a 5-layer Feature-Sliced architecture with ESLint-enforced boundaries. Now 559 files, zero cross-layer violations.
- Shipped the React Native app solo to the App Store and Play Store: Expo, JWT in encrypted device storage with silent logout on token expiry, reCAPTCHA v3, and the full EAS release pipeline.
- Migrated Material UI to a Tailwind design system: 37 primitives plus typed React Hook Form controllers reused across 37 routes.
- Shipped the product in 3 languages, with CI checks that fail the build on missing translation keys.

Stack: React · TypeScript · React Native · Expo · Vite · TanStack Query · shadcn/ui · Tailwind · AWS

PROJECTS

StackForm · stack-form-docs.vercel.app

2026 - Present · Creator & Maintainer

Open-source headless form library for React: one component per field instead of 10-15 lines of boilerplate. 7 packages on npm, adapter-agnostic across React Hook Form, TanStack Form and native state.

Stack: TypeScript · React · pnpm workspaces · tsup · Vitest · shadcn/ui

DevApply · devapply.app

April 2026 · Solo-built

Job application tracker for developers: Kanban pipeline, resume version management, follow-up reminders, and career analytics.

Stack: Next.js · Prisma · Neon · Clerk · PostHog · Resend

EDUCATION

Tbilisi State Technical University · Computer Science
