SUMMARY

Frontend engineer with 5 years building operational software people use all day: planning and scheduling tools for an EU logistics platform, and a restaurant reservation product I co-founded, where I lead the frontend. I work at the architecture level. Recent work: production builds cut from 52s to 3s, a 280-file codebase restructured into a Feature-Sliced architecture with zero boundary violations, and a React Native app shipped to both app stores. Also ship Java/Spring Boot services.

SKILLS

Frontend: React, TypeScript, Next.js, React Native / Expo, Redux Toolkit, TanStack Query, React Hook Form, Zod, Material UI, shadcn/ui, Tailwind, Vite, Feature-Sliced Design (FSD)
Testing: Vitest, React Testing Library, MSW, Jest
Backend: Java 17/21, Spring Boot, Spring Security, JPA/Hibernate, PostgreSQL, Node.js, Prisma
Infra & DevOps: Kubernetes, Docker, Helm, AWS (Secrets Manager, STS, OIDC), Jenkins, SonarQube, Prometheus
Languages: Georgian (native) · English (professional) · Russian (professional)

EXPERIENCE

Senior Software Engineer · Georgian Service Group June 2021 - Present

EU e-commerce logistics platform of 40+ Java/Spring microservices. Frontend lead in practice on a 5-engineer team. Backend across the services since May 2026, and now on the team planning the migration of two large Ext JS UIs to React.

- Built the core planning and scheduling interfaces (daily, weekly and historical views with dynamic filtering, forecasting and scenario comparison) that operations staff run the business on.
- Set the frontend data-layer standard used across an 8-engineer team: Redux Toolkit for UI state, TanStack Query for server state, plus a shared cache-invalidation policy that ended a recurring class of stale-data bugs.
- Built and maintained the shared component library (forms, tables, dialogs, filters) every frontend team builds on, removing duplicated UI across the platform.
- Modernised the toolchain: led the CRA to Vite and Moment.js to Day.js migrations, and introduced Vitest unit and integration testing to a codebase that had none.
- Built an internal service that maps the 40+ microservice estate: REST endpoints, call graphs, cross-service HTTP dependencies and database schema, with a dashboard, a chat assistant and generated architecture docs.
- Raised unit-test coverage to a 70% standard across about 15 services, and wrote the tooling and prompts the team uses to generate tests.

Stack: React · TypeScript · Vite · Redux Toolkit · TanStack Query · Vitest · Java 17/21 · Spring Boot · AWS

Co-founder & Frontend Lead · Skiper Technologies GmbH 2022 - Present

B2B restaurant reservation platform. One of three co-founders and frontend lead across the web portal, the embeddable widget and the mobile app.

- Rebuilt the web portal in 2026 with a new design and a Feature-Sliced architecture, and lead the frontend across 10+ product domains: portal, embeddable booking widget and React Native app.
- Cut production builds from 52 seconds to 3 by migrating CRA to Vite, then restructured a 280-file flat codebase into a 5-layer Feature-Sliced architecture with ESLint-enforced boundaries. Zero cross-layer violations.
- Shipped the React Native app to the App Store and Play Store: Expo, JWT in encrypted device storage with silent logout on token expiry, reCAPTCHA v3, and the full EAS release pipeline.
- Migrated Material UI to a Tailwind design system: primitives plus typed React Hook Form controllers reused across routes.
- Shipped the product in 3 languages, with CI checks that fail the build on missing translation keys.

PROJECTS

StackForm · stack-form-docs.vercel.app 2026 - Present · Creator & Maintainer

Open-source headless form library for React: one component per field instead of 10-15 lines of boilerplate. 7 packages on npm, adapter-agnostic across React Hook Form, TanStack Form and native state.

Stack: TypeScript · React · pnpm workspaces · tsup · Vitest · shadcn/ui

DevApply · devapply.app 2026 - Present · Solo-built

Job application tracker for developers: Kanban pipeline, resume version management, follow-up reminders, and career analytics.

Stack: Next.js · Prisma · Neon · Clerk · PostHog · Resend

EDUCATION

Tbilisi State Technical University · Computer Science
